Heterocyclic compounds can be usefully classified based on their electronic structure. The saturated heterocycles behave like the acyclic derivatives. Thus, piperidine and tetrahydrofuran are conventional amines and ethers, with modified steric profiles. Therefore, the study of heterocyclic chemistry focuses especially on unsaturated derivatives, and the preponderance of work and applications involves unstrained 5- and 6-membered rings. Included are pyridine, thiophene, pyrrole, and furan. Another large class of heterocycles are fused to benzene rings, which for pyridine, thiophene, pyrrole, and furan are quinoline, benzothiophene, indole, and benzofuran, respectively. Fusion of two benzene rings gives rise to a third large family of compounds, respectively the acridine, dibenzothiophene, carbazole, and dibenzofuran. The unsaturated rings can be classified according to the participation of the heteroatom in the pi system.

Our role within the BerrChem Corporation includes the following:

--Pharmaceutical raw materials and intermediates: acetonitrile, carvacrol, sebacic acid, biotin, API, etc

--Fine chemicals: intermediates of OLED and OPC drum, Fluorochem, Indole Derivative, Benzene Derivative, etc

--Catalysts and Phosphorous such as Binap system, biphenyl system. OLED etc.

--Other Chemical Industries: herbal extracts, acetone oxime, etc

BerrChem has formed competitive advantage globally in the manufacture of APIs, OLED Intermediates, Catalysts, FluoroChemicals, Indole

Derivatives and other fine chemicals, etc. Main stock list Products and services are served to customers and partners all over the world

including Asia, Europe, North America and South America.

<i>Our special technologies:</i>	
<i>• Organic phosphorus chemistry</i>	<i>• Organic sulfur chemistry</i>
<i>• Chiral synthesis and separation</i>	<i>• Oxidation-reduction reaction</i>
<i>• Grignard reaction</i>	<i>• Hydrogenation</i>
<i>• Chlorination</i>	<i>• Friedel-Crafts reactions</i>
